Project description
To check and change permissions so unauthorized people don't have access to files or directories they should not be able to access or modify

Check file and directory details
Ls -la is the command to check file and directory details

Describe the permissions string
Ok so day we have a string like -rw-r-x— its a regular file because of the - on the very first one and user can only read and write group can only read and execute and other cant do anything because no permissions are there

Change file permissions
Project_x.txt file by doing the chmod u-w,g-w .project_x.txt command

Change file permissions on a hidden file
I can use the chmod to remove write permission from the user and group on the hidden.
Project_x.txt file by doing the chmod u-w,g-w .project_x.txt command

Change directory permissions
Chmod g-x drafts i had to change and take away groups execution because its not supposed to have it
Summary
In this project i checked and explained file and directory details described permission strings changed file permissions changed permissions on a hidden file and change directory permissions
